Best Selling Product Currently on Market

Standard Protection -

Star Protection -

1. Padlock Locking System

1. Keypad Locking System in form of Three Keypad Locking Bolts

Analysis - Why is it important to have a keypad lock?

This is why it's important to have a quality keypad locking system that allows for easy access into your USB Flash Drive Case without having to fumble around with your set of keys, or worse yet risk breaking-in by forcing open an old entry padlock. A good digital deadbolt will make sure nobody else can use those same tools on you either!

2. No Location Tracking

2. Location Tracking by Built in On-Board GPS Tracker System in Event of Loss or

Theft

<u>Analysis – Why is it important to have onboard GPS Tracker?</u>

This is why it's important to have a quality onboard GPS Tracker System that allows for location tracking in event of loss, mislaid or theft scenarios, without such systems you are not protected by worst case scenarios such as loss, mislaying or theft, which can cause irreparable damage and incur penalisation from Regulatory Bodies.

3. No GeoFence

Geofence with a Call Home Feature in Event of the Case Being Lost,
Mislaid or Stolen. If the case is moved outside of geofence boundary it will call home to provide an alert.

<u>Analysis - Why is it important to have Geofence Call Home Feature?</u>

This is why it's important to have Geofence Call Home Feature, diversion of route or evasion notification could signal loss, mislaying or theft. Calling home in such events is paramount to detect and recover.

4. Double Walled

4. Constructed of Strong Materials such as Aluminium and Tungsten.

Analysis – Why is it important to have strong construction?

This is why it's important to have strong construction, harder to penetrate means bad actors would be spending more time trying to break in to the USB Flash Drive Case, this means more chances of recovering the case. Remember durable and reliable protection always lasts longer.

5. Impact and Temperature Extreme

5. Enhanced Impact and Temperature Extreme

Analysis – Why is it important to have Enhanced Impact and Temperature Extreme Resistance?

This is why it's important to have enhanced impact and temperature extreme resistance, being more resistive to damage from impacts leads to preventing data loss and temperature extremes are prevalent in todays changing weather patterns coupled with the increased optimality to travel across many landscapes enables the USB Zap Case to offer an enhanced protective feature.

6. No Penetration Sensing Security

6. Penetration Sensing Security

<u>Analysis – Why is it important to have Penetration Sensing Security?</u>

This is why it's important to have Penetration Sensing Security, Data Sensitivity is often comprised and barely a day goes by without their being some form of media coverage related to the loss and theft of data. By ensuring Penetration Sensors are present in your case, means an added form of protection in detecting physical attacks.

7. No Self-Destruction System

7. Self-Destruction System

<u>Analysis – Why is it important to have Self Destruction Security?</u>

This is why it's important to have Self Destruction Security, the rise in data theft and has led to irreparable loss of revenue and bad press which no one can truly measure the consequence of in terms of losing customers and brand ability, that has taken time to build. Movies such as Mission Impossible highlight that data is best kept secure through self-destruction protocols. The unique self-destruction system ensures data is managed effectively whilst in transit and whilst at rest.

8. No Battery

8. Low Battery Back - Up System

<u>Analysis – Why is it important to have a Low Battery Back – Up System?</u>

This is why it's important to have a Low Battery Back-Up System, a necessary anti-tampering feature that ensures the bad actor will not be able to compromise your data by simply waiting for the battery to run out before breaking in. Critical low battery initiates a prompt on your smartphone or similar device enabling you to make that very important key decision to self-destruct.

9. No Waterproofing

9. Waterproof and Dustproof

Analysis – Why is it important to have waterproofing and dust proofing exterior shielding?

This is why it's important to have waterproofing and dustproofing on your USB Flash Drive Case, a drop in water could render your data liable to loss and no dust proofing could mean dust in USB flash drive electronics which could affect the security apparatus and also your desktop.
